

Module 2: Overview of UiPath

Demo 1 – Solution

edureka!

edureka!

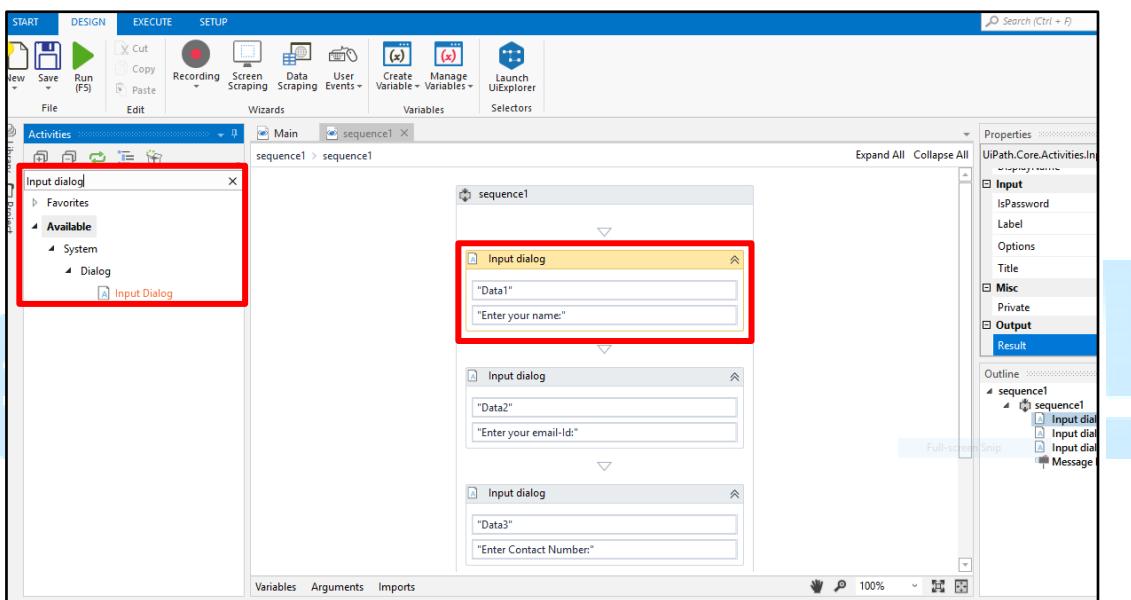

Demo 1

- Create a sequence that asks for inputs as follows:
1. Employee name
 2. His / Her Email ID
 3. Contact number
 4. Display the above Input in the form of a Message having the following format

edureka!

Demo 1 – Solution

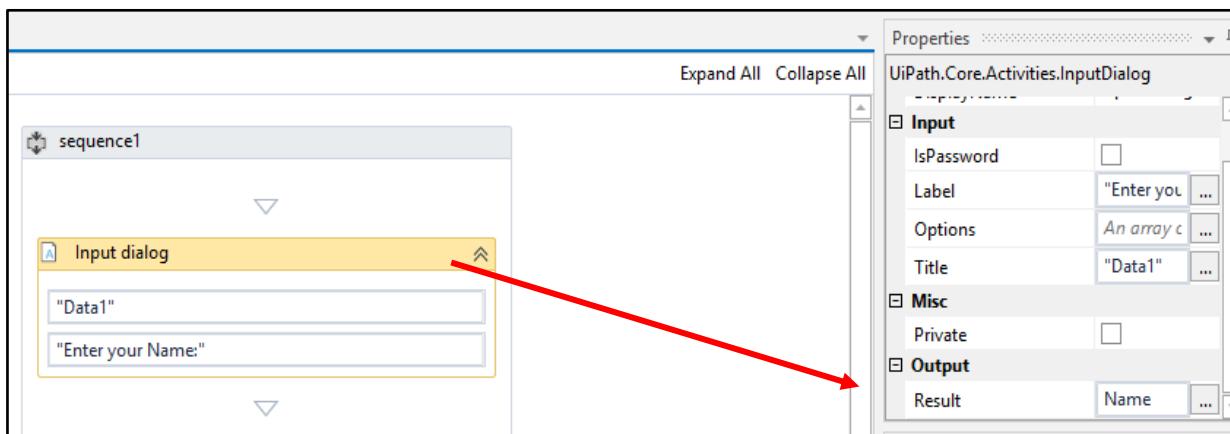

- **Step 1:** Create a blank project and, on the Design tab, in the File group, select New → Sequence. The New Sequence Diagram window is displayed. Give a name to the sequence
- **Step 2:** After the sequence box is created, search for **Input Dialog** in the search column in the activity panel. Drag three Input Dialog activities to the Designer panel, one under the other. Give a title and a label for each dialog as shown below:

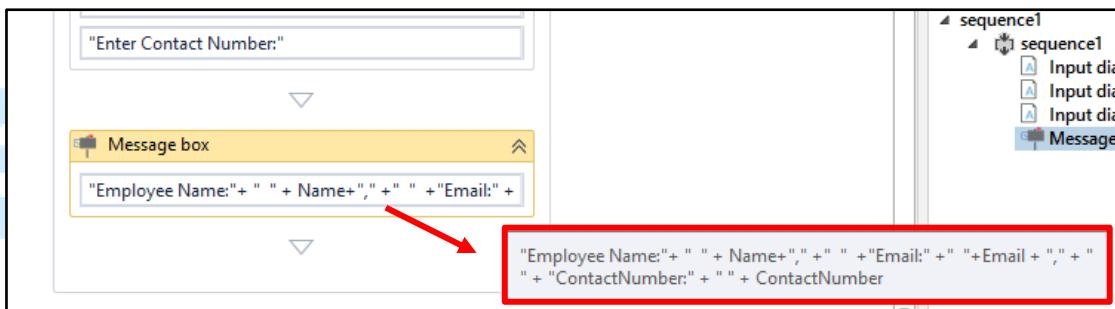

- **Step 3:** Create three String variables such as Name, Email, and ContactNumber, to store our data into them. Leave the Default field empty, to indicate that there is no default value

Name	Variable type	Scope	Default
Name	String	sequence1	""
Email	String	sequence1	""
ContactNumber	String	sequence1	""
Create Variable			
Variables		Arguments	Imports

- **Step 4:** In the **Properties Panel > Result** > Enter the variable name corresponding to each input dialog box

- **Step 5:** Add a **Message Box** activity under the third **Input Dialog**
 ➤ **Step 6:** Write the output message which includes the text and variables to display the output as shown:

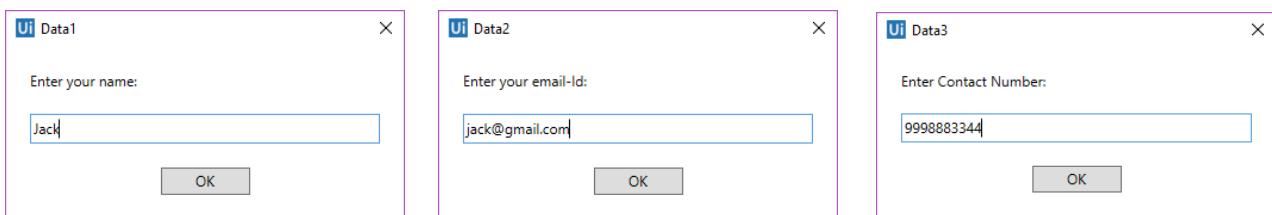

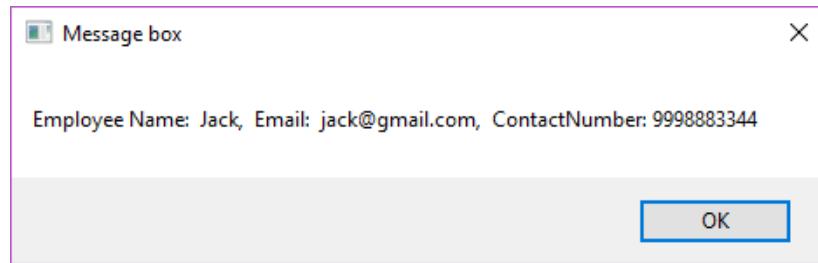

- **Step 7:** Run the sequenced by clicking the **RUN** icon

- **Step 8:** Dialog boxes will appear one by one asking for entering the data

- The output will appear in a message box as per the entered data
