

Module 2: Overview of UiPath

Demo 2 – Solution

edureka!

edureka!

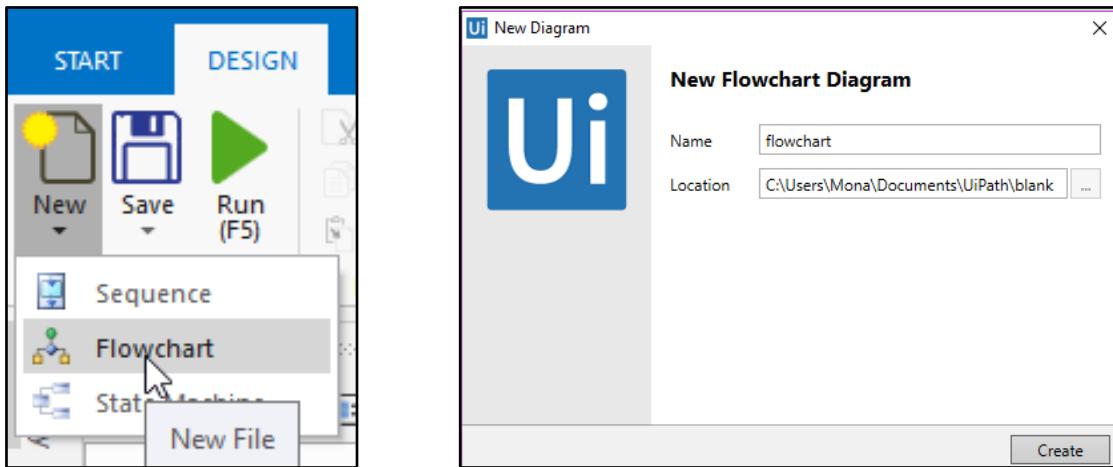

Demo 2

- Create a flowchart file to do the following:
 - Use a Decision box having a condition which will decide which sequence to execute
 - The condition is: Search Course = “ ”. If Search Course is empty it will lead us to Edureka’s Home Page else it will lead us to the respective course search page that the user has searched
 - E.g. If Search Course = “RPA”, it will lead to the Edureka’s RPA search result page

The logo consists of the word "edureka!" in a bold, lowercase, sans-serif font. The letters are a light blue color, and the exclamation mark is slightly smaller than the other letters.

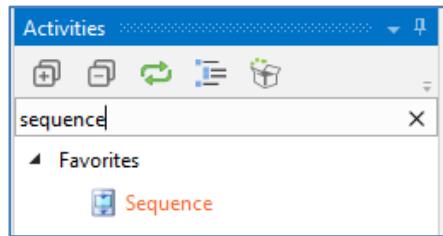

Demo 2 – Solution

- **Step 1:** Go to **New** icon > **Flowchart** > Window will appear asking a name for the file > **Create**

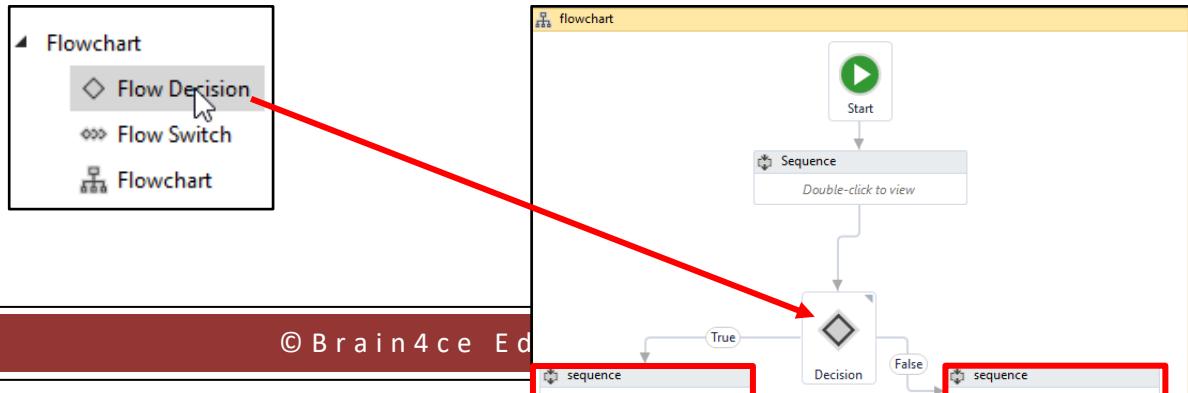

edureka!

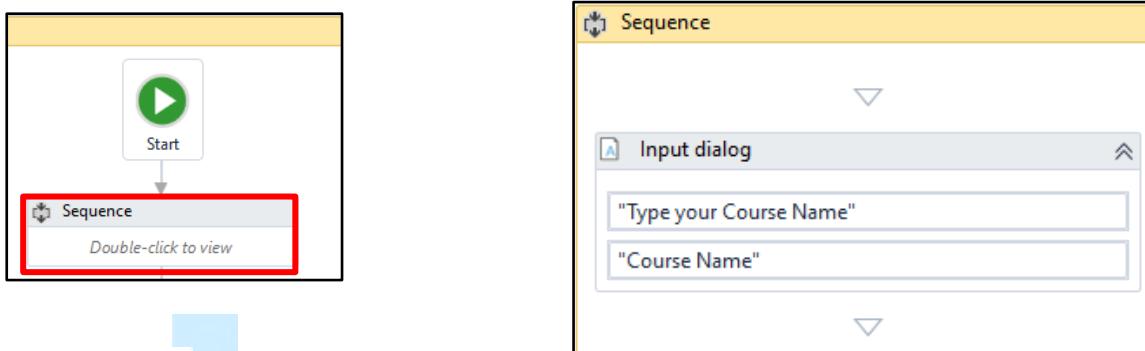

- **Step 2:** Search for sequence activity in the activity panel then drag and drop it to the Designer Panel

- **Step 3:** Similarly drag and drop the decision box into the designer panel from the activity panel

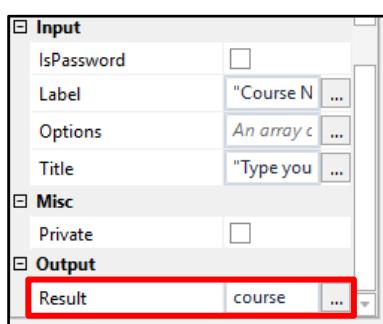

- **Step 4:** We also need 2 sequence boxes for executing our output based upon the decision (i.e. either True or False). Connect the arrows to the boxes as shown
- **Step 5:** Double click on the sequence box which is connected to the start Node. Drag and drop an Input dialog activity where we want the user to input a course name

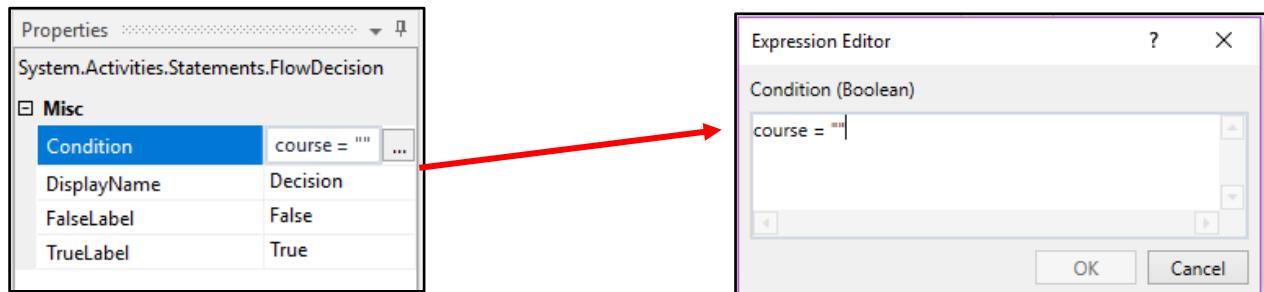

- **Step 6:** Create a variable that will store the course name

Name	Variable type	Scope	Default
course	String	flowchart	Enter a VB expression
Create Variable			

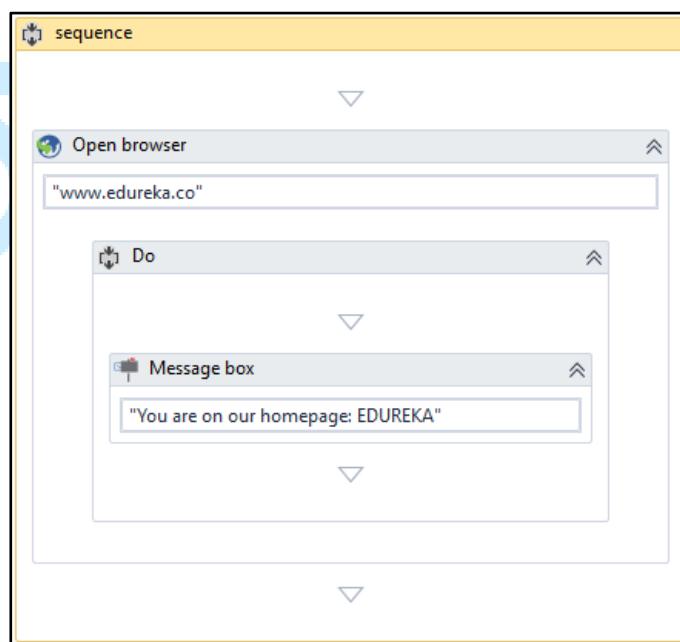

- **Step 7:** Click on the input dialog box inside the sequence, go to its properties panel and in the Result section add the same variable name which we created

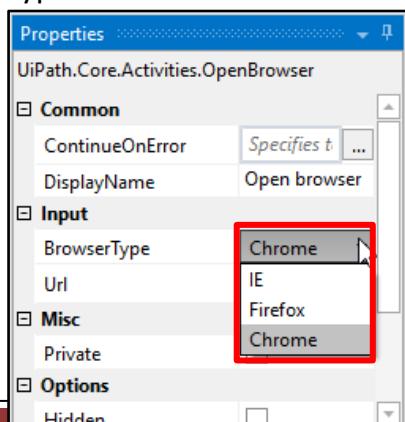

- **Step 8:** Click on the decision box, inside the properties panel add the condition by clicking on browse button

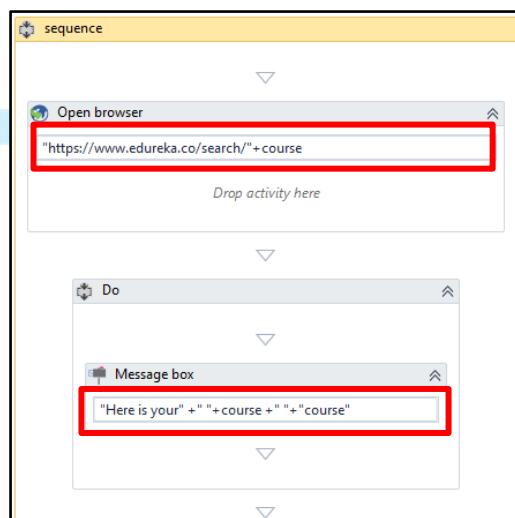

- **Step 9:** Double click on the sequence box which is connected to the True node of decision box and add the activities as shown (we need an Open browser and a message box activity)
- Inside the Open browser panel we have entered the URL of Edureka's home page
 - If the user has not selected any course, it should lead them to Edureka's home page
 - A message should appear after the site is opened, so we need to add the message box

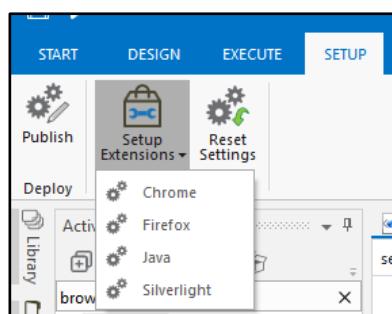

- **Step 10:** Select the open browser box and go to its property panel and select chrome as our browser type

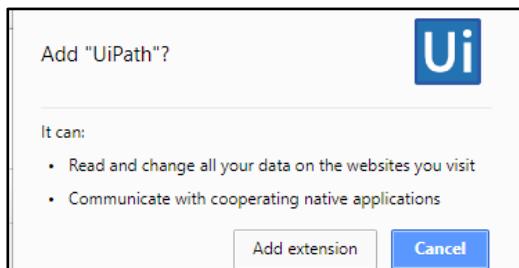

- **Step 11:** Go back to the Flowchart file, double click the sequence connected to the False node
- Repeat the same steps as for the previous sequence box, only the difference is that the URL and message is changed as shown

- **Step 12:** Since we want UiPath to access Chrome, we need to add UiPath extension to Chrome
- Go to **Setup** Ribbon > Click **setup Extensions** > **Chrome**

- **Step 13:** A window will be opened asking for adding UiPath to Chrome, click the button to add
- Click add extension

- **Step 14:** Run the project by clicking the RUN icon
- If user has entered a course name e.g.: RPA, then False condition will be executed and it will show the result containing RPA course
